SUMMARY

Consultant at Deloitte with experience in delivery management, functional analysis, software development, and product quality. Currently leading the Notices threads, a high-volume and business-critical stream for an integrated eligibility system. Experienced in cross-functional project management, stakeholder coordination, game design, software development life cycle management, UI/UX design, issue resolution, and application enhancement delivery.

EXPERIENCE

Deloitte Consulting LLP **Atlanta, Georgia**

Consultant/Delivery Management Engineer II *May 2026–Present*

- Leads the software development life cycle for the Notices workstream supporting an integrated eligibility system.
- Leads communications and continued integration with three interface partners including defect resolution, error triaging and resolution, and enhancement design.
- Coordinates and supports a cross-functional team of six functional analysts and consultants and nine developers.
- Leads daily cross-functional solutioning sessions to align business, technical, and delivery requirements with key stakeholders.
- Drives adherence to service-level agreement requirements through issue triage, prioritization, escalation, and resolution tracking.

Functional Analyst *November 2024–May 2026*

- Designs and implements long-term system issue resolutions and application enhancements in collaboration with functional and technical teams.
- Translates business needs into actionable requirements and delivery activities across the development life cycle.
- Serves as the primary client and vendor point of contact and subject-matter expert for Notices-related issues, enhancements, and delivery priorities.

FableVision Studios **Boston, Massachusetts**

Assistant Producer of video games and animations *January 2022-September 2022*

- Served as the primary client-facing representative for education boards, broadcasting services, and museums, managing requirements, progress communications, schedules, expectations, and delivery outcomes.
- Coordinated testing across multiple operating systems and platforms.
- Documented, prioritized, and communicated software defects and enhancement requests to optimize development team capacity and delivery timelines.
- Evaluated product compliance against stakeholder requirements, including state learning milestones and accessibility standards.

FACET Medical Technologies **Atlanta, Georgia**

Industrial and Systems Engineering Co-op *August 2018-December 2018*

- Observed, documented, and tested packaging procedures on the production floor. Introduced process efficiencies and quality control measures, by designing and building an automated lancet counter.
- Redesigned packaging procedures to reduce over-packaging error rates. Analyzed data, created, and updated system documentation, and designed product improvements for a lancet Machine achieving cost savings for FACET Medical Technologies.

EDUCATION

Georgia Institute of Technology **Atlanta, Georgia**

• Bachelor of Science, Computational Media: Games and Media; *GPA: High Honors* August 2017 - May 2023
